

+5V Fixed 1.5 Amp Regulator, Protection Diode, and 8 bit DAC08 Digital to Analog Converter

+5V voltage regulator and DAC08 D to A converter, residing in a single package. The +5V regulator input is protected by a series diode.

Two 4.7K resistors, of 1% tolerance, are included and connect to the regulator output to set the input reference. Logic threshold pin is internally connected to ground, which sets compatibility with TTL levels as an aid to integrating with typical TTL applications.
